

# Rx of Heart Failure

Craig W Clarkson

## Treatment of Heart Failure

### Across

- 2 Reducing this parameter increases cardiac output in patients with HFrEF
- 5 An antagonist of a hormone released by the adrenal gland that can increase survival in HFrEF
- 6 A common side effect of drugs acting on the kidney to reduce edema
- 8 The prototype of a class of drugs that can worsen heart failure acutely, but result in an improved EF over time
- 10 A drug that is sometimes used to treat heart failure, and which produces drug-induced lupus
- 13 The number for the abnormal heart sound most commonly heard in patients with diastolic failure
- 16 The prototype for a class of drugs used in treating heart failure, that may make you cough
- 18 Inhibiting this metalloprotease produces beneficial effects in patients with heart failure
- 19 A drug that can be useful in treating HFpEF, but harmful in treating HFrEF

### Down

- 1 The hyphenated name for the relationship between SV & CO that is affected by HFrEF
- 3 A common type of heart failure where the ejection fraction is preserved
- 4 A vasodilator that can cause cyanide poisoning
- 7 A diuretic drug class that can produce a rapid diuresis
- 9 Reducing this heart parameter can be useful in treating patients with HFpEF
- 11 A drug that can be used in a hospital setting for short-term improvement of the cardiovascular status of patients with HFrEF
- 12 A rather toxic drug used to treat heart failure in patients with persistent symptoms
- 14 An opioid useful in treating pulmonary edema
- 15 A class of receptor blockers that reduce blood pressure, but do not reduce mortality when used in the treatment of heart failure
- 17 Inhibiting this enzyme produces beneficial effects in patients with heart failure
